PLASTIC FOIL & SHEET EXTRUSION LINE

PLASTICSHEET

PLASTIC FOIL & SHEET EXTRUSION LINE

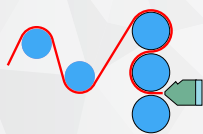

Our PLASTICSHEET extrusion lines are designed to process foil & sheet of PP, EPP (Expanded PP), HDPE, PET, CPET, PETG, PC, PA, EVOH, PS, EPS (Expanded PS) and PLA mono & multi-layer, via T-dies & co-extrusion feedblock, with manual or automatic adjustment.

The combination of Cast and Roll-stack technologies allows us to cover foil production thicknesses ranging from 80 to 2000 micron, using the same extrusion plant. While our sheet extrusion plants instead can reach up to 30mm thickness, mono & multi-layer.

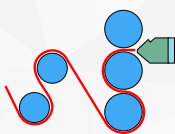

Furthermore our COMPACT series is a specially designed family of extrusion lines for the production of sheet for thermoforming. It is expressly conceived to achieve fully satisfactory performances both in-line (extrusion line + thermoforming machine) or off-line (self-standing Extrusion line).
